Computer Physics Communications

Contents to volume 96

Feature paper

Mitas, L.
Electronic structure by quantum Monte Carlo: atoms, molecules and solids 107

Computational physics

Pletzer, A.
Symplectic finite element scheme: application to a driven problem with a regular singularity 1

Dunn, D.
A Chebyshev differentiation method 10

Oleksy, Cz.
A convergence acceleration method of Fourier series 17

Parker, G.A., W. Zhu, Y. Huang, D.K. Hoffman and D.J. Kouri
Matrix pseudo-spectroscopy: iterative calculation of matrix eigenvalues and eigenvectors of large matrices using a polynomial expansion of the Dirac delta function 27

Tran, T.M., R. Gruber, K. Appert and S. Wuthrich
A direct parallel sparse matrix solver 118

Lewis, H.R. and P.J. Kostelec
The use of Hamilton's principle to derive time-advance algorithms for ordinary differential equations 129

Pisani, C. and U. Birkenheuer
Unrestricted Hartree–Fock treatment of paramagnetic defect centers in non-magnetic crystals VI 152

Long, L.N., M.M. Micci and B.C. Wong
Molecular dynamics simulations of droplet evaporation 167

Schneider, J., C. Froschhammer, I. Morgenstern, T. Husslein and J.M. Singer
Searching for backbones – an efficient parallel algorithm for the traveling salesman problem 173

Frühwirth, R., P. Kubinec, W. Mitaroff and M. Regler
Vertex reconstruction and track bundling at the LEP collider using robust algorithms 189

Hollmann, H.
A Maple V package for field theoretic Poisson brackets using object-oriented techniques 209

Mitsutake, A., T. Iitaka and Y. Okamoto
A method for calculating the eigenvalues of large Hermitian matrices by second-order recursion formulae 217

Computer programs in physics

Ilyin, V.A. and A.P. Kryukov
ATENSOR – REDUCE program for tensor simplification 36

Wieder, T.
WVM: A computer program for the determination of lattice parameters and strains in thin films 53

Mann, M., E. Shamonina and K.H. Ringhofer
Modelling of two wave mixing experiments in sillenite crystals 61

Miyamoto, A. and H. Hayashii
A Monte Carlo program to generate mini-jet events in the two-photon process 87

Marchand, R. and M. Dumberry
CARRE: a quasi-orthogonal mesh generator for 2D edge plasma modelling 232

Yano, T., K. Kitani, H. Miyatake, M. Otsuka, S. Tomiyoshi, S. Matsushima, T. Wada and Y. Ezawa
A high-speed method for eigenvalue problems. IV. Sturm–Liouville-type differential equations 247

Meyer, J., W.-D. Sepp, B. Fricke and A. Rosén
A new version of the program TSYM generating relativistic molecular symmetry orbitals for finite double point groups 263

Ng, C.N.M. and M.J. Carvalho
The Sp(3,$\mathbb{R}$) representations of an A-particle nucleus 288

Jönsson, P., F.A. Parpia and C. Froese Fischer
HFS92: A program for relativistic atomic hyperfine structure calculations 301

Head, A.K.
LIE, a PC program for Lie analysis of differential equations 311

Odorico, R.
A program for neural net and statistical pattern recognition 314

Sulsky, D.
Erratum: Application of a particle-in-cell method to solid mechanics [Comput. Phys. Commun. 87 (1995) 236–252] 105
